TASK 5: ADMINLTE INTERFACE DESIGN

Inventory and Sales Management System

Design Portfolio — AdminLTE 3

Student Name: _____

Registration Number: _____

Course / Class: _____

Date: _____

1. Introduction

This section presents the planned user interface for an Inventory and Sales Management System using AdminLTE 3. The system will help authorized staff manage products, categories, suppliers, stock quantities and sales records.

The interface is design-only: it describes the screens, labels, navigation, actions and feedback that the proposed system should contain. It does not claim that a working database or live application has already been built.

2. Main Navigation

The main navigation will remain consistent across the system so users can move between major tasks without getting lost.

Navigation item	Purpose
Dashboard	View stock summaries, sales totals and recent activity.
Products	Search, view, add and edit product records.
Categories	Organize products into groups.
Suppliers	Maintain supplier contact details.
Sales	Review completed sales and sale items.
Reports	Review sales and stock reports.
Settings / Users	Manage system access (if included in the project scope).

3. Screen 1 — Dashboard Wireframe

Purpose: Give the user a quick overview of stock and sales performance, plus a short list of recent activity.

Annotations: (1) Main header with system name and user menu. (2) Sidebar navigation. (3) Summary boxes show counts or totals. (4) Recent sales table highlights the latest transactions. (5) Low-stock list draws attention to products that may need reordering.

Annotated wireframe

INVENTORY & SALES MANAGEMENT SYSTEM	User menu / Notifications
Sidebar: Dashboard | Products | Categories | Suppliers | Sales | Reports	Top navigation
Dashboard > Home	Page title / breadcrumb
TOTAL PRODUCTS: 128	TOTAL STOCK UNITS: 845
TODAY'S SALES: TZS 450,000	LOW-STOCK ITEMS: 7
Recent Sales	Low Stock Items
Sale # | Date | Items | Total | Status	Product | Stock | Reorder level
S-104 | 18 Oct | 3 | 85,000 | Paid	USB Mouse | 4 | 10
S-103 | 18 Oct | 2 | 42,000 | Paid	Keyboard | 2 | 5
S-102 | 17 Oct | 1 | 25,000 | Paid	HDMI Cable | 3 | 8
Footer: System name / version	Footer

4. Screen 2 — Product List Wireframe

Purpose: Let staff search, filter, review and act on product records.

Annotations: (1) Breadcrumb shows the current location. (2) Search field finds products by name or SKU. (3) Category filter narrows the list. (4) Responsive table displays product, category, stock, price and status. (5) Action buttons allow a user to view or edit a record. (6) Status badges make low stock easy to identify.

Annotated wireframe

PRODUCTS	Breadcrumb: Home > Products
[Search by name or SKU...] [Category v] [Stock status v] [Search]	Search and filter controls
[+ Add Product]	Primary action button
SKU | Product | Category | Supplier | Qty | Unit Price | Status | Actions	Responsive data table

P001 | USB Mouse | Accessories | ABC Supplies | 4 | 15,000 | LOW STOCK | View Edit	
P002 | Keyboard | Accessories | ABC Supplies | 22 | 25,000 | IN STOCK | View Edit	
P003 | HDMI Cable | Cables | Tech Distributors | 3 | 10,000 | LOW STOCK | View Edit	
[Previous] Page 1 of 8 [Next]	Pagination

5. Screen 3 — Add/Edit Product Wireframe

Purpose: Provide a consistent form for creating a product or editing an existing product.

Annotations: (1) Clear field labels explain what information is required. (2) Category and supplier are selected from existing records. (3) Quantity and price fields accept numeric values. (4) Save validates and stores the form in the proposed system. (5) Cancel returns to the product list without saving changes. (6) Alerts display success or validation errors.

Annotated wireframe

ADD / EDIT PRODUCT	Breadcrumb: Home > Products > Add Product
Product Name *	[Enter product name.....]
SKU / Product Code *	[Enter unique code.....]
Category *	[Select category v]
Main Supplier	[Select supplier v]
Unit Price (TZS) *	[0.00.....]
Quantity in Stock *	[0.....]
Reorder Level *	[0.....]
Description	[Optional notes.....]
[Save Product]	[Cancel]
Feedback area: “Product saved successfully” or field-specific validation message	Alert / validation feedback

6. Component-use Matrix

At least eight distinct AdminLTE 3 components are planned below. Each component has a specific purpose and is linked to a screen and a data task.

No.	AdminLTE 3 component	Planned screen	Purpose	Related data / task
1	Small Box / Info Box	Dashboard	Summarize total products, stock units, today's sales and low-stock count.	Products, stock quantities, sales totals
2	Sidebar Navigation Menu	All screens	Provide consistent navigation between Dashboard, Products, Categories, Suppliers, Sales and Reports.	Navigation between system modules
3	Breadcrumbs	Product List and Add/Edit Product	Show the user's current location and make it easier to return to the parent screen.	Current page / route
4	Responsive Table	Product List	Display product records in columns while remaining usable on smaller screens.	SKU, product, category, supplier, quantity, price
5	Search Form / Input Group	Product List	Find a product by name or SKU and narrow results by category or stock status.	Product search and filters
6	Badges	Product List and Dashboard	Show stock condition such as IN STOCK or LOW STOCK using short visual labels.	Quantity compared with reorder level
7	Buttons / Button Group	Product List and Add/Edit Product	Provide clear actions such as Add Product, View, Edit, Save and Cancel.	Create, view, update and cancel actions
8	Form Controls / Select Inputs	Add/Edit Product	Collect product name, SKU, category, supplier, price, quantity and reorder level.	Product data entry
9	Alerts	Add/Edit Product	Tell the user when a record is saved or when an error needs correction.	Save result and validation feedback
10	Pagination	Product List	Split a long product list into manageable pages.	Large product result sets
11	Card	Dashboard	Group related information, such as Recent Sales and Low Stock Items, under clear headings.	Recent transactions and stock warnings

No.	AdminLTE 3 component	Planned screen	Purpose	Related data / task
12	Modal / Confirmation Dialog	Product List	Ask for confirmation before a destructive action such as deactivating a product.	Confirm deactivate action

7. Interface and Data Consistency

The Dashboard summaries will be calculated from product and sales records. The Product List will display fields defined for the Products table and related Category and Supplier records. The Add/Edit Product form will use the same field names as the product data dictionary. Product status badges will be based on stock quantity and the configured reorder level.

Only authorized users should be able to create, edit or delete records. Before deleting a product that appears in sales history, the system should prevent deletion or mark the product inactive so past sales remain understandable. This is a design recommendation and would need to be implemented in the application.

8. Assumptions

1. The project is an inventory and sales system for a small shop.

2. Each product belongs to one category; a category can contain many products.

3. A supplier can supply many products, while each product has one main supplier in this simplified design.

4. Each sale has one or more sale items. A sale item records the product, quantity and selling price at the time of sale.

5. Low stock means current quantity is less than or equal to the product's reorder level.

6. The screens are proposed wireframes for planning, not screenshots of a completed live application.

9. Conclusion

The proposed AdminLTE 3 interface provides a consistent route from summary information on the Dashboard to detailed product records and the Add/Edit Product form. The selected components support navigation, searching, reviewing data, identifying low stock and providing feedback. The interface and database plan should use matching field names and rules so the design remains consistent.

10. Final review checklist

■ Dashboard wireframe is included and its summary values are linked to system data.

■ Product List wireframe includes search, filters, status and record actions.

■ Add/Edit Product wireframe labels all fields and shows Save, Cancel and feedback.

■ At least eight distinct AdminLTE 3 components are mapped to screens and tasks.

■ Navigation, screen labels and data names are consistent.

■ All wireframes are design proposals and are not represented as a live working application.
